

Hobbeast — Üzleti kérés összefoglaló

Verzió: 1.7.1 Dátum: 2026-09-05

Added

Sprint 2 characterization test for place-search response normalization (src/lib/___tests___/placeSearch.test.ts) locking in the current NormalizedPlace contract (Geoapify + TomTom rows, sparse metadata fallback, rating→confidence clamp). mapEdgePlace is exported for testing.

Changed

Sprint 1.5 – migrated the shared Edge Function helpers to requireEnv: supabase/functions/shared/providerFetch.ts (service role key) and supabase/functions/sync-local-places/batchRunner.ts (Geoapify + TomTom keys) now log missing variable names only, never values.

Removed

Sprint 2 – deleted the duplicate supabase/functions/address-manager-shared/ folder (address-manager pipeline consistently imports the _address-manager-shared copy). Sprint 2 – deleted the duplicate supabase/functions/sync-local-places/_shared/ tree that carried a stale DEFAULT_SYNC_CONFIG (geo_limit: 60, tomtom_limit: 50) and was not imported by any function. Only the top-level constants.ts (with the 6000/6000 defaults) remains.

Fixed

Sprint 2 – removes the last on-disk source of the phantom 60/50 clamp that produced the "A backend kisebb limitet mentett vissza" toast when saving geo_limit / tomtom_limit = 200 in the admin UI. The active clamp remains 1 .. 1_000_000 in sync-local-places/config.ts.

Ez az összefoglaló 2026-09-05-én készült visszamenőleg, a CHANGELOG.md megfelelő bejegyzéséből származtatva, mert ehhez a verzióhoz eredetileg nem készült versioning-artefaktum. A tartalma a changeloból ellenőrizhető; nem a kiadás napján kelt dokumentum.
