

Hobbeast — Üzleti kérés összefoglaló

Verzió: 1.7.5 Dátum: 2026-09-05

Added

Documentation + CI-only pass covering the low-risk half of the remaining v2 audit backlog. No runtime code, no SQL, no dep bumps in this release — those still require per-item sign-off (key rotation, migration approval, breaking upgrades) and are staged in the new docs so a future round can execute each one atomically.

.github/workflows/ci.yml – quality gate on push/PR: tsc --noEmit, vitest run, scripts/validate-release.mjs, vite build. First CI gate the repo has; purely additive, does not block existing flows.

docs/SECURITY_DEFINER_AUDIT.md – full inventory of every SECURITY DEFINER function in supabase/migrations/, per-function risk rating, and the exact remediation template (add has_role(auth.uid(), 'admin') guard, REVOKE ... FROM PUBLIC, one function per migration). No SQL executed; audit only.

docs/MULTI_SUPABASE_CONTRACT.md – written contract for which project (Lovable Cloud olzvugh..., target dsymdijsydaehntlmfzl, geodata) each layer (frontend .env, Edge Functions, CLI) must point at, plus the failure signatures for misrouting. docs/DEP_UPGRADE_PLAN.md – sequenced major-upgrade plan (Zod 4 → date-fns 4 → Router 7 → Tailwind 4 → Vite 6 → React 19) with per-step verification gate and rollback rule ("one major per PR").

Changed

package.json version 1.7.4 → 1.7.5.

Deferred (still — decisions required from operator)

Secret rotation for Mapy / Geoapify / TomTom / Eventbrite / Ticketmaster: must be done in each provider's console; the repo already reads from env only (v1.7.4), no code change unblocks this. SECURITY DEFINER remediation migrations (Round B in the audit): one migration per High-risk function, needs approval per migration. Multi-Supabase runtime assertion module: designed in the contract doc, waiting for a build window with regression time. Dependency majors: sequenced in the upgrade plan; each bump lands as its own PR with a matching revert draft. place-search/index.ts 1455-line refactor and notification/community domain rebuild: still gated on characterization tests, per the repo non-negotiable rule.

Ez az összefoglaló 2026-09-05-én készült visszamenőleg, a CHANGELOG.md megfelelő bejegyzéséből származtatva, mert ehhez a verzióhoz eredetileg nem készült versioning-artefaktum. A tartalma a changeloból ellenőrizhető; nem a kiadás napján kelt dokumentum.
