

Hobbeast — Üzleti kérés összefoglaló

Verzió: 1.7.6 Dátum: 2026-09-05

Added

Additive follow-up to v1.7.5 covering every remaining v2 audit item that could be shipped without operator decisions (no key rotation, no SQL execution, no dep bumps). Focuses on characterization-test coverage that unblocks future risky refactors, plus the multi-Supabase runtime assertion promised in the contract doc.

src/lib/redirect.ts — pure sanitizeRedirectPath helper extracted from the inline v1.7.4 sanitizer in src/pages/Auth.tsx. Auth.tsx now delegates to it. Behavior identical. src/lib/supabaseProjects.ts — canonical TARGET_SUPABASE_PROJECT_REF, extractProjectRef, classifyProjectRef, assertTargetProject. Never returns the URL in the message; only the ref. Boot-time multi-Supabase assertion in src/main.tsx: logs a name-only console.warn if the frontend is bound to a project other than dsymdiizydaehntlmfzl (Lovable Cloud, unknown, etc.). Non-blocking. Characterization tests: src/lib/__tests__/redirect.test.ts (9 cases: empty, safe path, protocol-relative, javascript:, backslash, non-slash, malformed URL, percent-encoded internal and external). src/lib/__tests__/supabaseProjects.test.ts (8 cases including the "never leak URL in message" guard). src/lib/__tests__/adminEventbriteHelpers.test.ts (11 cases covering formatDbCell, matchesColumnFilters, enrichMapperRow). These lock the pure-helper contract so the deferred per-provider card split of AdminEventbrite.tsx can proceed safely. docs/sql/security_definer_round_b_DRAFT.sql — draft (not applied) of the SECURITY DEFINER Round B remediation for refresh_virtual_hubs and the sketch for admin_update_member_profile. Ships as a reviewable file; execution stays behind the migration-approval flow.

Changed

src/pages/Auth.tsx — inline sanitizer removed; imports sanitizeRedirectPath from @/lib/redirect. package.json version 1.7.5 → 1.7.6. Test count 31 → 42.

Deferred (unchanged — still require operator decisions)

Secret rotation for Mapy / Geoapify / TomTom / Eventbrite / Ticketmaster in the provider consoles. Nothing in the repo unblocks this. SECURITY DEFINER Round B execution: draft SQL is ready in docs/sql/, but each function change ships as its own approved migration. Dep majors (Zod 4 → date-fns 4 → Router 7 → Tailwind 4 → Vite 6 → React 19): sequenced in docs/DEP_UPGRADE_PLAN.md, one PR each.

supabase/functions/place-search/index.ts (1455 LOC) refactor and notification/community domain rebuild: still blocked on Edge Function characterization tests (out of scope for a frontend-only test suite; needs Deno-side harness).

Ez az összefoglaló 2026-09-05-én készült visszamenőleg, a CHANGELOG.md megfelelő bejegyzéséből származtatva, mert ehhez a verzióhoz eredetileg nem készült versioning-artefaktum. A tartalma a changelogloból ellenőrizhető; nem a kiadás napján kelt dokumentum.
