

Hobbeast — Üzleti kérés összefoglaló

Verzió: 1.20.2 Dátum: 2026-09-05

Fixed

Real event photos instead of shared banners, logos and "no image" fillers. Reported case: eventland.eu events all showed the same Heroes' Square picture even though each event page has its own photo.

Root cause: eventland.eu (and sites like it) put a single site-wide banner in every event's JSON-LD image field, while og:image carries the real per-event photo. The extractor trusted JSON-LD first and stopped there — so 18 different events inherited one banner. Generic fix — ranked image candidates + site-wide banner detection (resolveEventImages): every event now collects candidates (JSON-LD image, og:image, twitter:image, first content), and once a source is fully scraped, any candidate claimed as first choice by 3+ distinct event titles is treated as a site banner and skipped in favour of the next candidate. Repeats of the *same* title (a recurring series) still keep their shared image. Junk-image filter (isUsableImage): rejects "no image" fillers (noimage474.jpg), logos (logo-1-blue.png, logo.webp), placeholders, tracking pixels and SVG marks. Matching is anchored to path-segment boundaries so genuine photos survive — Songkick's .../artists/123/huge_avatar performer pictures are explicitly preserved. Hero-image fallback: when a page has no structured image at all, the first content-looking (jpg/png/webp, junk-filtered, absolutised) is used. Applied to all four strategies (render, rss, tribe, site adapters). Existing data cleaned: 30 rows whose image was a shared banner, logo or filler had image_url cleared, so a wrong photo is never shown; the nex

Verified

Live eventland scrape after the fix: 8 events → 8 distinct, correct photos (previously all 18 shared one banner). 6 new unit tests cover banner detection, series-image preservation, junk rejection and performer-photo preservation. Suite: 458 passed.
