

Hobbeast — Üzleti kérés összefoglaló

Verzió: 1.21.0 Dátum: 2026-09-05

Added — listing-level event extraction

****Listing-level extraction for the 190 zero-yield sources + admin-configurable schedules.****

Investigated the "nincs találat" sources with a dedicated Playwright recon (scraper-worker/recon-zero.mjs). Two root causes, both now fixed: koncert.hu-class sites (1265 cards, 665 dates on one page) navigate by JavaScript, so every card shares one href and the detail-page pipeline found nothing. New `collectListingCards()` reads title + date straight off the rendered listing: it walks each link, climbs at most four ancestors to the smallest block that also contains a date, and returns the pair. Detail-page events still win; a card is only kept when its title+date is not already covered. Live result: koncert.hu 0 → 181 events. programturizmus.hu (22 registered sources) publishes events as `/ajanlat-{slug}.html`; `ajanlat` was missing from the event-URL vocabulary. Live result: 0 → 10 clean events. Noise filters so listings do not import junk: `isNavigationTitle()` drops calendar day-links, pagers and titles that spell out a full date; cards linking to taxonomy pages (`/megye-`, `/kerulet-`, `/telepules-`) are skipped as filters rather than events. Listings are also scrolled before harvest for lazy content.

Fixed — news feeds misclassified as event feeds

Five sources (4× koncert.hu, Hegyvidék) were set to the rss strategy because the site advertises a feed — but koncert.hu/rss/hirek is a news feed, not an event stream: it yielded 4 articles while the rendered listing carries 182 dated concerts. Switched back to render (migration 20260826040000), which now benefits from listing-level extraction. ****Live result: koncert.hu archívum 4 → 192, koncertlista 0 → 182; +177 events inserted in a single run.****

Added — admin-configurable schedules

`scraper_schedules` table + `pg_cron` hourly dispatcher (`run_due_scraper_schedules`) that fires the GitHub workflow through `pg_net`. Operators pick hours and weekdays in the UI instead of writing cron syntax; `last_triggered_at` makes a double-fire inside one local hour impossible (Europe/Budapest). Schedules can target the selected sources or the automatic rotation, with per-schedule source/detail budgets, enable switch and last-run status. Admin RPCs (`admin_list_scraper_schedules`, `admin_upsert_scraper_schedule`, `admin_delete_scraper_schedule`) are `providers.manage-gated`; the dispatcher is `service-role` only. New `AdminScraperSchedules` panel on the Programgyűjtő tab. The previously hard-coded 06/14/22 GitHub cron is seeded as an editable schedule.

Ez az összefoglaló 2026-09-05-én készült visszamenőleg, a CHANGELOG.md megfelelő bejegyzéséből származtatva, mert ehhez a verzióhoz eredetileg nem készült versioning-artefaktum. A tartalma a changeloból ellenőrizhető; nem a kiadás napján kelt dokumentum.
