

Hobbeast — Üzleti kérés összefoglaló

Verzió: 1.25.0 Dátum: 2026-09-05

The constraint that shaped the design

Térképes programkereső — Booking-style map discovery. Full design brief: docs/Hobbeast_Terkepес_Kereso_Fejlесztoi_Prompt.md.

Only 2 of 1441 active programs carry coordinates, but 1038 carry a city name. Geocoding every event through an external API would be slow, quota-bound and needless, so the map aggregates on the city instead.

Added

hu_settlements (migration 20260826080000): static coordinate + county table covering every city present in the data plus all county seats, keyed by accent-folded name so Kőszeg / KŐSZEG / koszeg all match. map_event_clusters / map_events_at (migration 20260826081000): county-level and city-level aggregates with category counts, plus the programs of a selected area. Both readable by signed-out visitors — discovery is public. unplaced_total reports what could not be placed (the 350 Országos programs and city-less rows), so the UI states it rather than silently dropping them. /events/map: sidebar (county select, category chips with counts, result list) beside a full-height map. Zooming out shows county bubbles, zooming in switches to city pins; bubble size scales with the square root of the count so Budapest's 503 does not crush a town with 7. Clicking a bubble flies to the area and loads its programs; each card links to the Hobbeast page and offers a direct source link that records the outbound click. Hobbeast-styled Leaflet markers (brand-coloured bubbles, labels, hover states, themed tiles and controls, reduced-motion respected) — no new npm dependency, leaflet was already installed.

Verified

Live RPC data: 677 programs placed, 16 counties, 31 cities, Budapest 503; 764 correctly reported as unplaced. Typecheck, lint (0 errors), 479 tests, build and performance budget pass. The list view and its ranking logic are untouched: the map is a separate route.
