

# Hobbeast — Üzleti kérés összefoglaló

Verzió: 1.28.0   Dátum: 2026-09-05

## The internal link no longer dead-ends

An external program's own page — and a joint visit that never becomes a second event.

Every program on the map linked to `/events/<id>`, and every one of those links ended on "Az esemény nem található": `/events/:id` only ever looked in events, while external programs live in `external_events`. Shared and bookmarked links were broken for the same reason.

`get_external_event_safe()` now resolves one external program by id, through exactly the same availability gate the list uses — active, in date, verified recently, from an approved source — so a program either renders or is honestly gone. The not-found page also offers the way back to the map.

## "Menjünk el együtt!" — an extension, not a duplicate

Landing on a program nobody has organised a joint visit for opens the offer once: "Most nem, vissza a térképre" returns to the map view; `***Igen, szervezzünk egyet!***` opens a form already filled in from the original program — date, start time and venue — leaving the meeting point as the only real decision.

What it writes is deliberately small: `external_event_companion_plans` (host, meeting point, time, note) and `external_event_companion_members`. `**Nothing is ever written to events.**` A partial unique index allows exactly one open plan per program, so a second person cannot start a rival plan — they join the one that exists. That is the entire anti-duplication design, and it is enforced by the database, not by the UI. The program stays external everywhere: the card keeps its source badge and its original link, and ticket buying never moves to Hobbeast. Programs carrying a joint visit now also appear under the Hobbeast source filter, with a `Közös látogatás · N fő` badge saying what they actually are. The map sidebar shows the same count. Only the host's name is visible; everyone else is a number, matching the privacy stance of the existing interest signal. The host leaving cancels the plan, so nobody waits at a meeting point for somebody who is not coming. The lighter "csak jelezném, hogy érdekel" card kept its behaviour and lost its colliding title.

## Fixed

The map basemap is light again (CARTO Voyager) and the map uses the full window width; the dark tiles were being chosen from the operating system's colour preference although the app has no dark theme.
