

BUSINESS REQUEST SUMMARY / 2026-08-24

Win people back to each other.

Hobbeast v1.10.0 turns real hobbies into a more human invitation: genuine activity photography, real restrained motion and a clear message that shared life matters.

Delivery

Additive UI + media

The request

Replace flat hobby tiles with subtle real activity scenes. Use the wide hero frame with purpose. Keep both day and night moods, but replace fake image movement with short genuine clips. Make connection, shared learning, growth and mutual support visible everywhere - without reducing any existing capability.

Real activity at every discovery point

Seventeen category cards now show the experience itself, while a calm overlay keeps every label and action readable.

SPORT / MOVE

PLAY / THINK

LEARN / GROW

HELP / BELONG

One catalog. No fake flow.

17 categories

Every top-level card has its own locally hosted scene.

50 subcategories

Existing IDs, ordering and search stay unchanged.

263 activities

The complete drill-down and back flow remains native.

- Each card remains one keyboard-accessible native button with its original accessible name.
- Presentation imagery stays outside the shared hobby domain model, so organizer and event consumers do not change.
- All stock derivatives are committed locally with Pexels source, creator, license, transform and hash evidence.

Motion that moves. Connection that matters.

The hero is progressive enhancement; the deeper product message is that people learn, build and live better when they make room for one another.

Genuine subject motion

Two audio-free H.264 clips show people walking and celebrating. No pan/zoom imitation remains.

Context-aware mood

Season-aware daylight windows choose day or night, with stable per-day session selection.

Respectful by default

Mobile, Save-Data, 2G and reduced-motion visitors keep an eager static poster.

User-controlled

A visible keyboard control pauses motion; hidden and offscreen video pauses automatically.

The connected-life direction

- Learn from one another: create space to ask, practise and share knowledge.
- Grow together: move, make and improve at a human pace, without needing to arrive as an expert.
- Show up for one another: support can begin with an answer, an invitation or one shared afternoon.

Nyerjük vissza egymást.

Hobbeast creates meeting opportunities. People build the relationship.

Protected product contracts

- Routes, query parameters, auth, organizer/admin, event lifecycle, privacy and trust controls remain intact.
- No carousel, parallel discovery model, member testimonial claim or guaranteed happiness/health outcome was introduced.

Verification and release boundary

Repository, local browser, CI and hosted production are separate evidence layers. This page records only directly observed local results before publication.

GATE	VERIFIED RESULT
TypeScript + ESLint	PASS - zero errors; 14 pre-existing warnings
Vitest	PASS - 60 files / 325 tests
Production build	PASS - 3,220 transformed modules
Performance	PASS - CSS 20,454 gzip; main JS 48,304 gzip
Hero media	PASS - 2 files / 2,444,885 bytes total
Fresh database	PASS - 94 migrations / 15 fixtures
Responsive + media E2E	PASS - 14 passed; 1 credential-gated skip
Interactive browser	PASS - 320, 1440 and 1920 px QA

Release boundary

The authenticated mutating staging journey remains fixture-gated and is NOT_RUN without the required test credentials. Push, CI, Vercel deployment and the public URL must be verified separately after this artifact is built.

Evidence and rollback

The committed media ledger contains Pexels source pages, creator names, license link, derivative metadata, sizes and SHA-256 hashes. Roll back the v1.10.0 Connected City slice and rebuild from v1.9.9 if required. If only motion fails, keep the posters and roll forward with corrected clips; never roll back domain or security work.

Real people energy. One intentional motion surface. Zero feature removal.
